Business Information

NOT OPEN ON SUNDAYS. We do not have help to dig stock on Saturdays but if you want to pick up stock on Saturday let us know long enough in advance so we can have it ready for you.

THESE PRICES are in effect Spring 1955.

ALL OUR STOCK is fresh dug for each order. None of it is in storage except strawberry plants.

PRICES named in this Trade List apply only to orders placed by nurserymen, florists, and dealers. Maryland customers are subject to 2% sales tax or send your License Number. All delivery costs are to be paid by purchaser.

PACKING. All goods are packed in boxes and bales for which we charge sufficient to cover cost of material used. We will add this cost to your invoice. **This cost applies whether you remit with order or buy on time terms.**

CLAIMS, if any, must be made immediately upon receipt of goods, and if just, made satisfactory, but in no case are we responsible for more than the purchase price of the stock in question. **We will not be responsible for failure to fill orders in full or for any damage or delay to stock after delivery to the transportation company.**

TERMS. We offer the usual terms: net 30 days from date of shipment to those of known responsibility **but must have satisfactory business references from others or remittance must accompany order.** Those desiring stock shipped C.O.D. will please remit **one-fourth** the amount of their purchase when ordering. Other terms by special arrangement.

NON-WARRANTY. We give no warranty, expressed or implied, the purchaser assuming all risk and responsibility of transportation, growth, planting, life of stock or any other matter on any stock we sell. We send out good stock, carefully grown and packed but cannot control conditions after it leaves our care. We exercise the greatest care to keep our stock true to name and are willing to replace on proper proof any stock that may prove otherwise, or refund the amount paid us for such stock, but it is mutually agreed that we shall not at any time be liable for any greater amount.

TELL US HOW TO SHIP, whether by express, motor truck, or railroad freight. If by motor truck or railroad freight, tell us the route or over which line you want delivery made. If you do not give this information we will use our own judgment as to route and methods to use. **It is mutually agreed that whether you name the route or leave it to our own selection, we will not in any way be responsible for time or condition of delivery and our responsibility ceases upon our delivery to the transportation company.**

HARDINESS OF PLANTS. When hardiness of plants is mentioned herein it applies to this section.

TIME OF SHIPMENT. We ship most every week in the year with the possible exception of during the winter when bad weather makes it impossible, although this is very seldom. Of course, there is a regular season for shipping, the different plants, but if you want them out of season and are willing to take the risk of good delivery, we will pack with the utmost care and get them off to you at most any time you want them.

Plan to Visit Our Nursery

We will certainly be glad to have you come to see our stock for yourself. We believe you will find it compares favorably with that grown by other nurseries. Some of our customers have told us it is better than is furnished by some others. We are on the Eastern Shore of Maryland, 100 miles south of Wilmington, Delaware, 100 miles from Kiptopeke-Norfolk, Va., ferry, 90 miles from Annapolis, Md., via Chesapeake Bay Bridge, 150 miles from Baltimore, Md., via Elkton, Md., 225 miles from New York, N. Y. We hope you can come to see our stock. It is good driving on the famous Eastern Shore.

Grafting Is Easy

You have often wanted to propagate some plants of a scarce or high priced variety but did not have the proper facilities to do it with. With a new outfit we are offering, you can do it yourself, as easily as making an old-fashioned graft. You take a branch of the shrub or tree you wish to graft (leaving it on the parent plant) girdle the branch or twig, put damp peat moss or damp sphagnum moss around the girdled part and wrap it tightly with this new waterproof plastic (in sheets) and tie it, top and bottom, with rubber bands. Generally within six to eight weeks the twig is rooted ready to pot. It requires no watering or other attention until ready to pot. Complete outfit (enough plastic sheets and rubberbands to make 100 grafts) with complete instructions how to do the grafting, for $5.00 postpaid.

TELL US HOW TO SHIP, whether by express, motor truck, or railroad freight. If by motor truck or railroad freight, tell us the route or over which line you want delivery made. If you do not give this information we will use our own judgment as to route and methods to use. **It is mutually agreed that whether you name the route or leave it to our own selection, we will not in any way be responsible for time or conditions of delivery and our responsibility ceases upon our delivery to the transportation company.**

CAMELLIA SASANQUA

These handsome flowering evergreens have proven entirely hardy here and we believe they are as hardy as the Kurume Azaleas. They bloom from September until freezing weather. The demand for these plants is increasing about as much as for any plant we grow. Suggest you try them and treat them about as you would the Kurume Azaleas as to soil and culture. For further description ask for our Azalea, Camellia, and Rhododendron booklet, no charge.

HOLLY (Ilex)

For many years we have been urging nurserymen to grow more holly. Fifteen years ago there was not very much demand for holly. If you will refer to our catalogs about that time and since, you will find we said, "The nurseryman who will grow a collection of Hollies to a specimen size will have something he can sell, whether times are good or whether they are bad. There is always a demand for them, and there will be as long as any other plants will sell."

Try to buy nice holly now, see how scarce it is. We find demand increasing each season.

Tree Peonies

Because of their novelty and great beauty, Tree Peonies are rapidly becoming one of the most desired plants. They bloom earlier than ordinary Chinese Peonies and their flowers are of immense size. These plants are established in 5 inch pots and can be removed safely at any time.

There has been so much demand for these Tree Peonies we have added additional varieties to our list.

The Rare Franklinia

A Very Unusual Flowering Tree

Each twig develops at its tip a cluster of buds of graduated size, like overgrown greenish pearls. Early in August the largest of these attain the size of marbles. Then the guard petal folds back, still retaining its firm spherical form. From this shelter emerges four other petals, satiny, snowy white, elaborately frilled and pleated. The snowy, frilly chalice, three inches in diameter, holds a sumptuous mass of orange-gold stamens and breathes forth a delicate, balmy fragrance.

Each flower lasts two or three days and then drops cleanly. **There is a constant succession of blooms till hard frost.** We frequently get the unusual effect of a tree clad in crimson, autumn foliage and abundantly starred with white flowers.

The Franklinia begins blooming when not more than 3 or 4 feet high. Young trees under favorable conditions increase in height a foot or more each season. Specimens 30 feet high are known. It develops naturally with several trunks, but may easily be trained to a single trunk by removing the sprouts which start from the base.

Franklinia prefers full sun, has proved entirely hardy about New York and hardy in favorable locations about Boston, Mass., and in Ohio.

TAXUS (Yew)

The Taxus are undoubtedly the most popular and useful of all the ornamental evergreens. We have been growing them exclusively a good many years and the demand keeps increasing.

The English Yew (Taxus baccata) is not reliably hardy in the north, and many do not realize that the Japanese, and many forms of Media, are perfectly hardy in and around Boston, and the Japanese even in northern New England.

They are not so particular as to character of soil except that it should not be too wet, but they do appreciate plenty of good plant food. They are immune to many insect pests and plant diseases so destructive to many other evergreens.

The Yew in its many species and forms can well be used in most all places where any other evergreen will do well.

We honestly believe you will do well to plant and grow on some of these Yews.

AUNT MARY'S SWEET CORN

THE SWEET CORN SUPREME

This is the most wonderful Sweet Corn we have ever grown. One grower describes it as "the best Sweet Corn in the world."

Has the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's Corn, by its excellent quality, sweetness, and flavor makes a stronger appeal to the Corn-loving public than most any other variety and that appeal continues long after you are tired of other Sweet Corns.

Liberal size packets, 35c each; 3 for $1.00, postpaid.

If after growing this wonderful Sweet Corn you are not entirely satisfied, we will refund every cent you paid us for it.

THE MEDIA HYBRID DAY LILIES

In these Media hybrids we have all the latest colors in red, maroon, mahogany, pink, rose and a few yellows produced by one of the leading Hemerocalis breeders. They are mixed but you are bound to get a variety in each hundred lot. We have several thousand we are offering at $12.50 per 100 or $100.00 per 1000. A very unusual bargain offer.

AS GOOD AS CAN BE GROWN

We are exerting effort to produce the very best stock that can be grown, and in our forty-five years' experience we believe we have never offered bigger values than we are offering this season. Even with the short supply of Lining-Out stock we have kept our prices at a low level. We feel sure you will be more than pleased with the stock we send you if you give us your order.

We try to secure our propagating wood from only the very best type of plants, and by doing this we can furnish you stock that should be of the best that it is possible for you to get anywhere, regardless of price.

HARDINESS OF PLANTS. When hardiness of plants is mentioned herein it applies only to this section unless otherwise mentioned.

For something that is really good we are offering this spring for the first time by any nursery, plants and cuttings of the new "Bennett Hybrids Ilex Crenata" varieties. They look good to us.

The New BENNETT HYBRIDS ILEX CRENATA

Your opportunity to get in on the ground floor of something new and good.

ILEX CRENATA COMPACTA

Two years from a rooted cutting.

These new Ilex Crenata Bennett Hybrids are natural crosses between Ilex Crenata Convexa, Ilex Crenata Rotundifolia and Ilex Crenata Microphylla; all of which are compact growers needing little or no trimming for full specimens or block planting. They have been selected for leaf type and for compactness of growth.

Fast enough grower to make you money yet slow enough so it may be used around the ranch or low-foundation house.

As easy as the other Crenata varieties to grow and as resistant to diseases and insects as most any plant. Grows in light or heavy soil.

NOT PATENTED

No restrictions in propagating or selling of any kind. Get some stock plants and do your own propagating or if you are not equipped to do this we will furnish you rooted cuttings.

The following varieties can be furnished in 15 to 18 in. size at $4.50 each or $4.25 each in lots of 10 or more. Rooted Cuttings, $15.00 per 100.

Description of the Bennett Hybrids
Ilex Crenata Varieties

ILEX CRENATA "COMPACTA". Is a flat leaf, very dark green, very compact grower, apparently needing no trimming to make a broad globe-shaped plant.

ILEX CRENATA "WILLOW LEAF". Light green, flat leaf of spreading growth.

ILEX CRENATA "MAXWELL. Light olive green, slightly convex leaf, spreading growth, slightly more ascending than Ilex Crenata Convexa.

ILEX CRENATA "VASEYI". A medium convex leaf, broad-based type of growth, breaks excellent.

ILEX CRENATA "HOWARD". Very dark green leaves, slightly ascending growth, heavy grower.

ILEX CRENATA "OLEAFERA". Dark olive green, large leaf type, spreading habit; this is a female plant.

ILEX CRENATA "MAJOR". Flat leaf, good color of green, heavy grower, very similar to Rotundifolia, but breaks much better.

Long-Cluster Goldenchain

(Laburnum vossi)

THE THRILL OF THRILLS

Just as the Lilacs are finishing it lets down its gorgeous yellow racemes, **like flowing gold,** and out of all proportion to the size of the plant.

Commencing as a little tree studded with heavy buds, Long-cluster Goldenchain soon branches out into a vase-shaped tree and ordinarily will not reach a height of over 12 ft. Plant it in a somewhat protected place, as an accent shrub or lawn tree like the Magnolia.

This variety is hardier, the flowers larger than the common Laburnum vulgare. Because of being scarce and high-priced, very few plants have been planted in this country, but it is an old favorite in Europe.

WINTER-FLOWERING WITCH-HAZEL

(Hamamelis vernalis)

On mild January days the first flowers appear, yellow petals, reddish towards the base. This unusual shrub blooms over a period of three months, emitting the delightful spicy odor of almonds. 1 yr. seedlings at $12.50 per 100.

Beautiful colors, long season of bloom, and hardiness of plants are the three factors that make Azaleas among the most desirable of all the flowering shrubs. They are happiest when grown in a mixture of common soil, leaf-mold, or muck, with a little well-rotted manure. The roots are near the surface, therefore a mulch of peat moss, leaves, or pine straw will be useful. Avoid lime, potash, or clay.

Turn back to page 18 and note our prices on Magnolia Soulangeana.

We Know You Will Like Them

GROWING GOOD AZALEAS

Azaleas will grow in full sun or in shade. In the sun you will have brighter colors and growth will be shorter. We prefer a little shade if convenient. The small pot-grown plants should be planted about ten or twelve inches apart in a prepared bed consisting of about equal parts of good acid soil and peat moss or rotten leaf-mold, with about one-half shade.

Azaleas like acid soil with plenty of peat moss or leaf-mold in it. As a fertilizer rotten cow manure, cotton-seed meal and tankage are good. Use this in early spring and keep well mulched with peat moss or leaf-mold and keep the plants well watered during dry weather.

A FASCINATING HOBBY

Growing Azaleas is a hobby which provides an ever increasing source of interest. There are so many species to be had and so many almost breath-taking new hybrids being produced, that one is amazed at the magnificent display that we may have with only a small space of ground and a few of the newer plants that are now being offered. If you want a stimulating (and profitable) hobby that grows more interesting, beautiful and valuable every year, then grow Azaleas.

KURUME AZALEAS

The Kurume Azaleas are one of the most showy of all flowers for the garden. They are also well adapted to forcing—thousands of them being sold for Easter, Mother's Day, and Decoration Day. They are comparatively easy to grow and make such a wonderful display that the demand is constantly increasing. Many of the varieties are hardy out-of-doors as far north as Long Island. They are extremely floriferous, and in season, the blossoms completely cover the plants. The colors are almost every hue and shade except yellow, as you will find below.

GABLE'S HARDIER AZALEAS

Mr. Joseph B. Gable of Pennsylvania has spent almost a lifetime working with Azaleas and Rhododendrons. Many years ago he started breeding azaleas with the hopes of producing a hardier type of evergreen azalea in a good color range than then available. He has had wonderful success and is now recognized as the leader in this field.

You who have been getting our catalogs for the past fifteen years have seen how successful his efforts have been and there are many more of his later productions following as soon as sufficient stock can be produced.

We are very proud that Mr. Gable has furnished us with these new creations as soon as he had the stock to offer and we know from the reports we have received from our customers that his hopes have been more than realized.

As to hardiness: these varieties will average hardier than Hinodegiri and Amoena and much hardier than the other Kurumes. All have lived and flowered in the open field where they have withstood temperatures of twenty below zero and more in the past few winters with only negligible injury to a few. Most of them were uninjured.

KAEMPFERI HYBRID AZALEAS

In these new Kaempferi Hybrids—the result of crossing Kaempferi and Malvatica—there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers so far achieved. Several years' tests have demonstrated that these new Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts. In connection with these Hybrids we suggest you try out the new Gable varieties we are offering.

ARNOLDIANA AZALEAS

In 1914, the late Jackson Dawson, then superintendent of the Arnold Arboretum, at Boston, Mass., created a splendid new type of hardy Azalea by crossing Azalea Kaempferi and Azalea Amoena. Of the seedlings thus produced a considerable number of them were grown at Boston from their infancy until flowering age, when the following ones of unusual beauty and vigor of growth were selected.

These Arnoldiana Azaleas have done exceptionally well in Indianapolis, Indiana, and we can recommend them for trial in similar soils and conditions.

PRINTING

After selling our printing department seven years ago, one of the young men (Charles L. Parker), who had been working for us, decided to start a printing business of his own. He will be very glad to quote on any work you may want done. With much pleasure I recommend him and am sure you will find him reliable in every way, and we both will appreciate any order you may place with him. Send all correspondence about printing direct to

MERRITT AZALEAS

A collection of very worthwhile Azaleas produced by the late Dr. E. A. Merritt of Bethesda, Maryland. Have heard quite a bit about these Azaleas and finally secured a complete collection of them. We think they are well worth trying south of Philadelphia and possibly where the regular Kurume varieties will grow. The colors are bright and clean. Our stock plants look like they would make good forcing varieties. We are suggesting you try them.

We are offering the two- and three-year sizes this season at **75c each in lots of 5 or more of a variety.**

ASIA. Pink, hose-in-hose, medium size. Good.
BEGONIA ROSE. Large, fine begonia-rose, hose-in-hose.

Forsythia Lynwood Gold

A New Forsythia from Ireland

This new Forsythia is of a deep yellow color (see colored illustration). A good variety to grow with the light yellow "Spring Glory" variety. The golden-yellow flowers simply hide the upright growing branches. For you who want branches for forcing this is one of the best.

2 to 3 ft. plants, 10 for $6.50, 100 for $60.00
18 to 24 in. plants, 10 for $5.50, 100 for $50.00

*EDCO IRON

***(The Chelated Iron in This Product is "Sequestrene" Brand)**

For experimental use in the control of chlorosis (lack of chlorophyl) in azaleas, gardenias, roses, citrus crops, etc.

Results to date have shown Edco Iron to be very effective in correcting chlorosis in the above crops. Chlorosis may be caused by the excess or deficiency of several major or minor nutrient elements in the plant besides iron, and it may be caused by an excess of water or its lack, but Edco Iron commonly seems to help correct the effect if not the cause of these several conditions.

Preliminary test work conducted with this material shows some wonderful results.

Full directions for using with each lot.

Prices: 1 lb. $2.30; 10 or more lbs. at $2.00 per lb. delivered.

GLENN DALE AZALEAS

The Division of Plant Exploration and Introduction at the Glenn Dale Plant Station began introducing, in 1941, a group of selected seedlings from their own crosses. We have been growing and propagating these plants since then and we are now offering them to the trade.

The purpose of this breeding work was to obtain a class of winter-hardy Azaleas that would have as large and varied flowers as those of the "Indian Azaleas" which are not hardy in this section. Mr. B. Y. Morrison, who has been leading in this work, has done a wonderful job, not only in producing large size and varied colors but also has bred the hardiness into the plants. These plants are most interesting. The flowers run to over 5-inches across and include both self-colored and variegated. The plants are mostly excellent growers and do well here, and from all appearances will grow well in much colder sections.

The following descriptions were furnished us by Mr. Morrison and are based upon the original material as grown at Glenn Dale, Maryland, and give as figures for heights those of the original plants, all between 15 and 20 years old, under normal development except for the removal of propagating wood during a two season period.

The number following variety name is the Glenn Dale Station number.

Sometimes when Azalea flowers are described as striped or flaked on white they will appear as a solid color. When this occurs the branch should be cut out. This seems inherent with the variety—not any fault of the nurseryman.

Blooming dates are for vicinity of Washington, D. C., in a normal season.

In the picture below we are trying to show you how the new Glenn Dale Azaleas look. For size, delicacy and boldness of color we do not think they can be equaled. For hardiness they appear to be equal to the Kurumes, if not better. Something new in Azaleas.

This shows one way to use this shading. We stretch wires over beds about 16 inches from ground.

Woven Lath Shading

Our woven lath shading is an efficient and economical material for the protection of newly set rooted cuttings, seed beds and small seedling transplants. It protects them from the hot rays of the sun and strong and destructive winds.

The construction of the beds is simple. You can use narrow boards (4 inch) nailed on small stakes (2 x 2 inches or 1 x 4 inches), or you can do as we do. We stretch two wires three feet apart over a four foot bed (this will leave the lath shading extending over each wire six inches. This makes it easy to roll and unroll the shading without rolling off the wires. The wires are placed about 16 inches from the ground, thus giving the small plants plenty of room to grow before reaching the shading.

This Woven Lath Shading is easily handled, and when not in use you just roll it up and store away until ready to use it again.

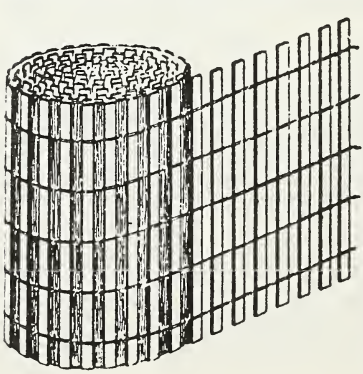
The laths or pickets are approximately ⅜ inch thick x 1½ inch wide and 4 ft. long and are woven with five double strand 12½ gauge galvanized wire, spaced about the right width apart to give proper shading.

This Woven Lath Shading is painted with a solution of red mineral oxide, greatly extending the life and use of the shading.

It is made in rolls of 50 and 100 feet. Can be easily handled by one or two persons.

It is also useful for making fences, to protect new plantings of grass and shrubbery around parks and fields and many other uses you may find for it. Can be easily rolled up again at any time and stored in a small space for future use.

A little investment in proper protection of tender and newly planted plants may save you many tedious hours of labor, considerable expense and may even save you an entire season's growth of your valuable plants.



Why take chances of sun ruining your plants? You can get over 3,000 plants under 100 feet roll when planted 4 in. apart each way.

Another big advantage of using this Woven Lath Shading is that you can water your plants even while the sun is shining hot on them. This means a lot in continued dry weather. Price: Up to 500 ft. at 23 cents per running foot, over 500 feet at 22 cents per running foot. Large quantities specially priced.

GROW CHESTNUTS

WITH THE BLIGHT RESISTANT ORIENTAL VARIETIES

Most people know that a terrible scourge (blight) has befallen our native Chestnut tree, but many do not know that the Oriental species are resistant to this blight. These foreign Chestnuts also bear when very young. We had nineteen burrs averaging three nuts each on a tree 40 inches tall. These trees are not as tall growing as was our American species, but grows more spreading, making a round top tree.

There is very much interest in these foreign species and we are very fortunate in having a nice supply to offer this season.

With a new outfit we are offering, you can do it yourself, as easily as making an old-fashioned graft. You take a branch of the shrub or tree you wish to graft (leaving it on the parent plant), girdle the branch or twig, put damp peat moss or damp sphagnum moss around the girdled part and wrap it tightly with this new waterproof plastic (in sheets) and tie it, top and bottom, with rubber bands. Generally within six to eight weeks the twig is rooted ready to pot. It requires no watering or other attention until ready to pot. Complete outfit (enough plastic sheets and rubberbands to make 100 grafts) with complete instructions how to do the grafting, for $5.00 postpaid.

Aunt Mary's Sweet Corn

THE SWEET CORN SUPREME

This is the most wonderful Sweet Corn we have ever grown and one grower describes it as "the best sweet corn in the world."

It is of the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's corn, by its excellent quality, sweetness, and flavor, makes a stronger appeal to the corn-loving public than any other variety and that appeal continues long after you are tired of other sweet corns.

Price liberal size packets, 35c each, 3 for $1.00 postpaid.

If after growing this wonderful sweet corn you are not entirely satisfied we will refund every cent you paid us for it.

Berberis Crimson Pigmy

Dwarf Red Leaf Japanese Barberry

Three years ago we imported some of these dwarf barberries from Holland. It is one of those real good finds one comes across very seldom. Our four year plants are now about 15 inches wide and ten inches tall. A truly dwarf variety. The old leaves are a rich, lustrous bronze-red, the new growth is a much lighter red. Almost identical in color to a Japanese red maple at its most colorful stage.

2-inch pot plants, 1 yr., $4.00 for 10, $35.00 per 100.
2¼-inch pot plants, 2 yr., $6.00 for 10, $50.00 per 100.

GROWING GOOD AZALEAS

Azaleas will grow in full sun or in shade. In the sun you will have brighter colors and growth will be shorter. We prefer a little shade if convenient. The small pot-grown plants should be planted about ten or twelve inches apart in a prepared bed consisting of about equal parts of good acid soil and peat moss or rotten leaf-mold, with about one-half shade.

Azaleas like acid soil with plenty of peat moss or leaf-mold in it. As a fertilizer rotten cow manure, cotton-seed meal and tankage are good. Use this in early spring and keep well mulched with peat moss or leaf-mold and keep the plants well watered during dry weather.

For scale and red spider use Volck, one to fifty.

If your soil is not acid enough we suggest you use Aluminum Sulphate or Sulphur.

LET $100 EARN $1,000

We believe $100 spent in our lining-out stock will increase in value from $1,000 to $1,500 in three years. The increase should be practically the same whether you invest a less or greater amount. By growing the stock yourself you have it on hand so you can let your customers see just what they are buying and you save the freight and packing charges. We will gladly help you make the best selections. Come see our stock if you have the time.
